Recent regulation changes have allowed the automotive radar market to shift from the 24-GHz band to the 77-GHz band, introducing a range of new design and test challenges. Higher frequencies facilitate wider bandwidths and increasing resolution, while the shorter wavelengths provide smaller form ... Radio - Wikipedia
Radio is the technology of signalling or communicating using radio waves. Radio waves are electromagnetic waves of frequency between 30 hertz (Hz) and 300 gigahertz (GHz). They are generated by an electronic device called a transmitter connected to an antenna which radiates the waves, and received by a radio receiver connected to another antenna. Radio is very widely used in modern technology ... A survey of 5G technologies: regulatory, standardization ... 1. Introduction. The fast development of electronic devices has brought about the advent of various emerging applications (e.g., big data analysis, artificial intelligence and 3-Dimensional (3D) media, Internet of everything, and so on), which requires significant amount of data traffic.
