VBA: User Defined Functions (UDFs) — xlwings dev documentation Note. You only need to re-import your functions if you change the function arguments or the function name. Code changes in the actual functions are picked up automatically (i.e. at the next calculation of the formula, e.g. triggered by Ctrl-Alt-F9), but changes in imported modules are not. This is the very behaviour of how Python imports work. Comparison of browser engines (HTML support) - Wikipedia This article compares HTML support for several browser engines.. Support for the many new additions of the current HTML5 standard is in its own section after the items that preceded it in the history of HTML.
