
Dark Matter In The Universe

DARK MATTER IN THE UNIVERSE - *Dark Matter In The Universe (FREE)* Dark matter is a hypothetical form of matter that is thought to account for approximately 85% of the matter in the universe and about a quarter of its total energy density. The majority of dark matter is thought to be non-baryonic in nature, possibly being composed of some as-yet undiscovered subatomic particles. Its presence is implied in a variety of astrophysical observations, including ... - Thu, 18 Apr 2019 22:20:00 GMT Cold dark matter - Wikipedia Ghostly galaxy without dark matter confirmed | Astronomy.com Implication for dark matter With a sample size of just two galaxies, it's hard to draw any sweeping conclusions just yet. But by showing that some galaxies contain no appreciable dark matter, the ... What is dark matter? | Astronomy.com Dark matter research is unsettling. Scientists were unnerved when they first noticed that galaxies don't rotate by the same physics as a spinning plate. The stars at a galaxy's edge rotate ... Dark Matter Searches at Colliders - arxiv.org signatures.¹ Moreover, we use the term invisible particles (rather than DM) when emphasizing that detecting such particles need not be a discovery of DM.² The body of DM model literature can be divided into two extremes. Dark Matter vs. Aether | Sean Carroll This is an easier one than dark matter vs. modified gravity. As mentioned, I'm going to be on Science Friday today, and they asked me to contribute a guest blog post, which I'm cross-posting below. Old news, I'm sure, for longtime CV readers, but here you go. [0803.0982] Dark Energy and the Accelerating Universe Abstract: The discovery ten years ago that the expansion of the Universe is accelerating put in place the last major building block of the present cosmological model, in which the Universe is composed of 4% baryons, 20% dark matter, and 76% dark energy. At the same time, it posed one of the most profound mysteries in all of science, with deep connections to both astrophysics and particle physics. Dark Energy FAQ | Sean Carroll In honor of the Nobel Prize, here are some questions that are frequently asked about dark energy, or should be.. What is dark energy? It's what makes the universe accelerate, if indeed there is a "thing" that does that. (See below.) So I guess I should be asking... what does it mean to say the universe is "accelerating"?
