Motor control - Wikipedia Motor control is the systematic regulation of movement in organisms that possess a nervous system. Motor control includes movement functions which can be attributed to reflex, and to volition. Motor control as a field of study is primarily a sub-discipline of psychology or neurology. Sports biomechanics - Wikipedia Sports biomechanics is a quantitative based study and analysis of professional athletes and sports activities in general. It can simply be described as the physics of sports. In this subfield of biomechanics the laws of mechanics are applied in order to gain a greater understanding of athletic performance through mathematical modeling, computer simulation and measurement. NASM-CPT Study Guide 6 NASM-CPT Study Guide Functional Biomechanics Fundamentals of Biomechanics Biomechanics—science concerned with internal and external forces acting on the body. Force—influence applied by one object to another, accelerates or decelerates the second object. Torque—a force that produces rotation.
