Integral equation - Wikipedia Overview. The most basic type of integral equation is called a Fredholm equation of the first type, = ? (,) ().The notation follows Arfken.Here ? is an unknown function, f is a known function, and K is another known function of two variables, often called the kernel function. Note that the limits of integration are constant: this is what characterizes a Fredholm equation. Mathematical Tools for Physics Bibliography. Mathematical Methods for Physics and Engineering by Riley, Hobson, and Bence. Cambridge Uni-versity Press For the quantity of well-written material here, it is surprisingly inexpensive in paperback. Bernoulli Number -- from Wolfram MathWorld The Bernoulli numbers B_n are a sequence of signed rational numbers that can be defined by the exponential generating function $x/(e^x-1)=\sum_{(n=0)}^{\infty}(B_n x^n)/(n!)$. (1) These numbers arise in the series expansions of trigonometric functions, and are extremely important in number theory and analysis. There are actually two definitions for the Bernoulli numbers. Legendre polynomials - Wikipedia In physical science and mathematics, Legendre polynomials (named after Adrien-Marie Legendre, who discovered them in 1782) are a system of complete and orthogonal polynomials, with a vast number of mathematically beautiful properties, and numerous applications.They can be defined in many ways, and the various definitions highlight different aspects as well as suggest generalizations and ...
