Construction and demolition waste constitutes a large fraction of all the waste generated in Europe. Its specific impact can be considered rather low, but the large generated volume and embodied resource makes this waste stream an important focus of current European policies. Recycling - Wikipedia Recycling is the process of converting waste materials into new materials and objects. It is an alternative to "conventional" waste disposal that can save material and help lower greenhouse gas emissions. Recycling can prevent the waste of potentially useful materials and reduce the consumption of fresh raw materials, thereby reducing: energy usage, air pollution (from incineration), and water ... An overview of the problems posed by plastic products and ... 1. Introduction: plastic as a valuable material and problematic waste. Plastics are synthetic or semi-synthetic organic polymers that are lightweight, strong, durable and low cost (Van Eygen et al., 2017). For these characteristics they are used for the production of a very wide range of products and they have rapidly moved into all aspects of human life. Rammed earth | YourHome Rammed earth walls are constructed by ramming a mixture of selected aggregates, including gravel, sand, silt and a small amount of clay, into place between flat panels called formwork. Traditional technology repeatedly rammed the end of a wooden pole into the earth mixture to compress it. Modern technology replaces the pole with a mechanical ram.
